

## High Limit Stat Reset Guide

1. **POWER OFF THE EDDI COMPLETELY** (switch at no. 5)

2. Find button at top of immersion and press (this is a delicate switch so you may not feel it click). Once this is done, turn the EDDI back on to see if issue is resolved.

3. If issue continues, **POWER OFF THE EDDI COMPLETELY** (see step 1.) and remove the top cover by unscrewing the nut. Once removed, reset the limit switch by pushing down with a pen on the button – this will not click, it is a very small area.

4. Thermostat gauge must then be turned down – twist gauge to 50 degrees. Screw the top cover back on and power EDDI back up to see if issue is resolved. If this issue continues, please contact the office directly.
